Rob,

I never sent comments to the Army on this. Do you have anything to add to your comments below?

Thanks.

Hello Julio,
There's not actually much for Tech Law to read. This is Annual Report Year 10, and only 1 well has anything, and limited. I'll read it through, but a glance at the recommendations is to end sampling (but keep wells in place). Since this was used for fire training, do you recall if it was part of their PFAS sampling?

I'm not certain if it becomes problematic at other BRAC sites if we concur to stop sampling. The excavation WAS effective, and it doesn't appear the minor area around MW-52 is a big problem. However, let me go through it. My first opinion is to only schedule 1 more sampling round before the next scheduled FYR.

Regards
Rob

Rob,

Should I task TechLaw to review? Let me know. Thanks.
